Paste-paste presentation plus mixing pad

caviLINE Calcium Hydroxide Lining Paste

caviLINE is a Calcium Hydroxide based two paste system used for capping pulp or protective liner under dental filling materials and cements.

The catalyst and base pastes are presented in laminated tubes. The material mixes to a smooth creamy consistency to a 'dentin-like' colour and self-setting to rigid solid liner that will not inhibit the polymerisation of acrylic and composite restorations.

Indications

Direct and indirect pulp capping
Protective liner under dental filling materials, cements and other base materials

Features

Good flow characteristics
Calcium hydroxide
Radiopaque

Advantages

Easy to apply; seated easily and evenly
Aids material manipulation outside mouth
Shows on X-rays
Hard setting

Available in	Code
13gm Base/11gm Catalyst	AH0760
