

2 X 2gm paste in foil-packed syringes

astrinGIVAL Gingival Retraction Paste

astrinGIVAL is an astringent formulation to provide gingival retraction & haemostasis.

This product is a blue-green paste developed exclusively for transient use in the oral cavity. An astringent formulated to provide gingival retraction and hemostasis. Syringe contains an astringent retraction paste for any situation in which a temporary displacement of the marginal gingival and/or the assurance of a dry and clean sulcus is required.

The acidic paste containing aluminium chloride that is applied from syringe tip into the sulcus. A hemostatic effect results from the compression on the gums by the paste containing aluminium chloride as an astringent. This hemostatic effect quickly closes any small blood vessels which might be unintentionally opened. Depending on the clinical situation and working technique of the person performing the treatment, the paste can be used as an alternative to or in combination with retraction cords or other retraction methods.
